

Derek Korn

Editor-in-Chief | *Production Machining*

BIO

Derek Korn was named *Production Machining's* editor-in-chief in 2020. Prior to that, he spend 16 years writing for *Modern Machine Shop* magazine and seven years with an industrial public relations company. He says visiting CNC machine shops to write about how they leverage new technology and processes to their advantage is the most enjoyable part of his job. In this role, he gets to help guide the brand as it focuses on helping niche machining businesses — many of which perform high-precision, high-volume CNC turning work — become more efficient operations. His mechanical engineering technology degree from the University of Cincinnati provides a firm foundation for understanding manufacturing technology so that he can explain its benefits to owners and managers of precision machining operations.
